

Soul

[Jump to navigation](#)[Jump to search](#)

For other uses, see [Soul \(disambiguation\)](#).

The **soul**, in many religious, philosophical, and [mythological](#) traditions, is the [incorporeal essence](#) of a living being.^[1] Soul or [psyche](#) ([Ancient Greek](#): ψυχή *psykhḗ*, of ψύχειν *psýkhein*, "to breathe") comprises the mental abilities of a living being: reason, character, feeling, consciousness, memory, perception, thinking, etc. Depending on the philosophical system, a soul can either be mortal or [immortal](#).^[2]

Greek philosophers, such as [Socrates](#), [Plato](#), and [Aristotle](#), understood that the soul (ψυχή *psūché*) must have a logical faculty, the exercise of which was the most divine of human actions. At his defense trial, Socrates even summarized his teaching as nothing other than an exhortation for his fellow Athenians to excel in matters of the psyche since all bodily goods are dependent on such excellence (*Apology* 30a–b).

In [Judeo-Christianity](#), only human beings have immortal souls (although immortality is disputed within Judaism and the concept of immortality may have been influenced by Plato).^[3] For example, the Catholic theologian [Thomas Aquinas](#) attributed "soul" (*anima*) to all organisms but argued that only human souls are immortal.^[4] Other religions (most notably [Hinduism](#) and [Jainism](#)) hold that all living things from the smallest bacterium to the largest of mammals are the souls themselves ([Atman](#), [jiva](#)) and have their physical representative (the body) in the world.

The actual [self](#) is the soul, while the body is only a mechanism to experience the karma of that life. Thus if we see a tiger then there is a self-conscious identity residing in it (the soul), and a physical representative (the whole body of the tiger, which is observable) in the world. Some teach that even non-biological entities (such as rivers and mountains) possess souls. This belief is called [animism](#).^[5]

The current [consensus of modern science](#) is that there is no evidence to support the existence of the soul when traditionally defined as the spiritual breath of the body. In [metaphysics](#), the concept of "Soul" may be equated with that of "[Mind](#)" in order to refer to the [consciousness](#) and [intellect](#) of the individual.

Etymology[\[edit\]](#)

This section **does not cite any sources**. Please help [improve this section](#) by [adding citations to reliable sources](#). Unsourced material may be challenged and [removed](#). (October 2017) ([Learn how and when to remove this template message](#))

The Modern English word "**soul**", derived from [Old English](#) *sáwol*, *sáwel*, was first attested in the 8th century poem *Beowulf* v. 2820 and in the [Vespasian Psalter](#) 77.50 . It is cognate with other German and [Baltic](#) terms for the same idea, including [Gothic](#) *saiwala*, [Old High German](#) *sêula*, *sêla*, [Old Saxon](#) *sêola*, [Old Low Franconian](#) *sêla*, *sîla*, [Old Norse](#) *sála* and [Lithuanian](#) *siela*. Deeper etymology of the [Germanic](#) word is unclear.

The original concept behind the Germanic root is thought to mean "*coming from or belonging to the sea (or lake)*", because of the Germanic and pre-Celtic belief in souls emerging from and returning to [sacred lakes](#), [Old Saxon](#) *sêola* (soul) compared to [Old Saxon](#) *sêo* (sea).

See also: [Spirit](#)

The [Koine Greek Septuagint](#) uses ψυχή (*psyche*) to translate [Hebrew](#) נֶפֶשׁ (*nephesh*), meaning "life, vital breath", and specifically refers to a mortal, physical life, but in English it is variously translated as "soul, self, life, creature, person, appetite, [mind](#), living being, desire, emotion, passion";^{[citation needed](#)} an example can be found in [Genesis 1:21](#):

Hebrew – וַיִּבְרָא אֱלֹהִים, אֶת-הַתַּיִם הַגְּדֹלִים; וְאֶת כָּל-נֶפֶשׁ הַחַיָּה הַרְמֻשָּׁת׃^{[citation needed](#)}

Septuagint – καὶ ἐποίησεν ὁ θεὸς τὰ κήτη τὰ μεγάλα καὶ πᾶσαν ψυχὴν ζώων ἐρπετῶν.

[Vulgate](#) – *Creavitque Deus cete grandia, et omnem animam viventem atque motabilem.*

[Authorized King James Version](#) – "And God created great whales, and every living creature that moveth."

The Koine Greek word ψυχή (*psychē*), "life, spirit, consciousness", is derived from a verb meaning "to cool, to blow", and hence refers to the breath, as opposed to σῶμα (*soma*), meaning "body".^{[citation needed](#)} *Psychē* occurs juxtaposed to σῶμα, as seen in [Matthew 10:28](#):

Greek – καὶ μὴ φοβεῖσθε ἀπὸ τῶν ἀποκτενόντων τὸ σῶμα, τὴν δὲ ψυχὴν μὴ δυναμένων ἀποκτεῖναι· φοβεῖσθε δὲ μᾶλλον τὸν δυνάμενον καὶ ψυχὴν καὶ σῶμα ἀπολέσαι ἐν γέεννῃ.

Vulgate – *et nolite timere eos qui occidunt corpus animam autem non possunt occidere sed potius eum timete qui potest et animam et corpus perdere in gehennam.*

[Authorized King James Version \(KJV\)](#) – "And fear not them which kill the body, but are not able to kill the soul: but rather fear him which is able to destroy both soul and body in hell."

[Paul the Apostle](#) used ψυχή (*psychē*) and πνεῦμα (*pneuma*) specifically to distinguish between the Jewish notions of נֶפֶשׁ (*nephesh*) and רוּחַ *ruah* (spirit)^{[citation needed](#)} (also in the Septuagint, e.g. [Genesis 1:2](#) וְרוּחַ אֱלֹהִים = πνεῦμα θεοῦ = *spiritus Dei* = "the Spirit of God").

Religious views[[edit](#)]

Ancient Near East[[edit](#)]

Main articles: [Ancient Egyptian concept of the soul](#) and [Religions of the ancient Near East](#)

The [souls of Pe and Nekhen](#) towing the royal barge on a relief of [Ramesses II](#)'s temple in Abydos.

In the [ancient Egyptian religion](#), an individual was believed to be made up of various elements, some physical and some spiritual. Similar ideas are found in ancient Assyrian and Babylonian religion. [Kuttamuwa](#), an 8th-century BCE royal official from [Sam'al](#), ordered an inscribed [stele](#) erected upon his death. The inscription requested that his mourners commemorate his life and his [afterlife](#) with feasts "for my soul that is in this stele". It is one of the earliest references to a soul as a separate entity from the body. The 800-pound (360 kg) [basalt](#) stele is 3 ft (0.91 m) tall and 2 ft (0.61 m) wide. It was uncovered in the third season of excavations by the Neubauer Expedition of the [Oriental Institute](#) in Chicago, Illinois.^[6]

Bahá'í[[edit](#)]

The [Bahá'í Faith](#) affirms that "the soul is a sign of God, a heavenly gem whose reality the most learned of men hath failed to grasp, and whose mystery no mind, however acute, can ever hope to unravel".^[7] [Bahá'u'lláh](#) stated that the soul not only continues to live after the physical death of the human body, but is, in fact, immortal.^[8] Heaven can be seen partly as the soul's state of nearness to God; and hell as a state of remoteness from God. Each state follows as a natural consequence of individual efforts, or the lack thereof, to develop spiritually.^[9] Bahá'u'lláh taught that individuals have no existence prior to their life here on earth and the soul's evolution is always towards God and away from the material world.^[9]

Buddhism[[edit](#)]

[Buddhism](#) teaches the principle of [impermanence](#), that all things are in a constant state of flux: all is changing, and no permanent state exists by itself.^{[10][11]} This applies to human beings as much as to anything else in the cosmos. Thus, a human being has no permanent self.^{[12][13]} According to this doctrine of [anatta](#) (Pāli; Sanskrit: *anātman*) – "no-self" or "no soul" – the words "I" or "me" do not refer to any fixed thing. They are simply convenient terms that allow us to refer to an ever-changing entity.^[14]

The *anatta* doctrine is not a kind of [materialism](#). Buddhism does not deny the existence of "immaterial" entities, and it (at least traditionally) distinguishes bodily states from mental states.^[15] Thus, the conventional translation of *anatta* as "no-soul"^[16] can be confusing. If the word "soul" simply refers to an incorporeal component in living things that can continue after death, then Buddhism does not deny the existence of the soul.

^[17] Instead, Buddhism denies the existence of a permanent entity that remains constant behind the changing corporeal and incorporeal components of a living being. Just as the body changes from moment to moment, so thoughts come and go, and there is no permanent state underlying the mind that experiences these thoughts, as in [Cartesianism](#).

Conscious mental states simply arise and perish with no "thinker" behind them.^[18] When the body dies, Buddhists believe the incorporeal mental processes continue and are reborn in a new body.^[17] Because the mental processes are constantly changing, the being that is reborn is neither entirely different from, nor exactly the same as, the being that died.^[19] However, the new being is *continuous* with the being that died – in the same way that the "you" of this moment is continuous with the "you" of a moment before, despite the fact that you are constantly changing.^[20]

Buddhist teaching holds that a notion of a permanent, abiding self is a delusion that is one of the causes of human conflict on the emotional, social, and political levels.^{[21][22]} They add that an understanding of *anatta* provides an accurate description of the human condition, and that this understanding allows us to pacify our mundane [desires](#).

Various schools of Buddhism have differing ideas about what continues after death.^[23] The [Yogacara](#) school in [Mahayana](#) Buddhism said there are [Store consciousness](#) which continue to exist after death.^[24] In some schools, particularly [Tibetan Buddhism](#), the view is that there are three minds: *very subtle mind*, which does not disintegrate in death; *subtle mind*, which disintegrates in death and which is "dreaming mind" or "unconscious mind"; and *gross mind*, which does not exist when one is *sleeping*.

Therefore, *gross mind* is less permanent than subtle mind, which does not exist in death. *Very subtle mind*, however, does continue, and when it "catches on", or coincides with phenomena, again, a new *subtle mind* emerges, with its own personality/assumptions/habits, and *that* entity experiences [karma](#) in the current continuum.

Plants were said to be non-sentient (無情),^[25] but Buddhist monks are required to not cut or burn trees, because some sentient beings rely on them.^[26] Some Mahayana monks said non-sentient beings such as plants and stones have [Buddha-nature](#).^{[27][28]}

Certain modern Buddhists, particularly in [Western countries](#), reject—or at least take an agnostic stance toward—the concept of rebirth or reincarnation. [Stephen Batchelor](#) discusses this in his book *Buddhism Without Beliefs*. Others point to [research](#) that has been conducted at the [University of Virginia](#) as proof that some people are reborn.^[29]

Christianity[edit]

See also: [Soul in the Bible](#), [Christian mortalism](#), [Immortality of the soul](#), [Christian conditionalism](#), [Christian mortalism](#), and [Annihilationism](#)

Soul carried to Heaven by [William Bouguereau](#)

According to a common [Christian eschatology](#), when people die, their souls will be [judged by God](#) and determined to go to [Heaven](#) or to [Hell](#). Other Christians understand the soul as the life, and believe that the dead are sleeping ([Christian conditionalism](#)). This belief is traditionally accompanied by the belief that the unrighteous soul will cease to exist instead of suffering eternally ([annihilationism](#)). Believers will inherit [eternal life](#) either in [Heaven](#), or in a [Kingdom of God](#) on earth, and enjoy eternal fellowship with God.

Although all major branches of Christianity – Catholics, [Eastern Orthodox](#), [Oriental Orthodox](#), [Church of the East](#), [Evangelical](#), and [mainline Protestants](#) – teach that Jesus Christ plays a decisive role in the [Christian salvation](#) process, the specifics of that role and the part played by individual persons or by [ecclesiastical](#) rituals and relationships, is a matter of wide diversity in official church teaching, theological speculation and popular practice.

Some^{[[which?](#)]} Christians believe that if one has not repented of one's sins and has not trusted in Jesus Christ as Lord and Savior, one will go to [Hell](#) and suffer eternal [damnation](#) or eternal separation from God. Some^{[[who?](#)]} hold a belief that babies (including the unborn) and those with cognitive or mental impairments who have died will be received into Heaven on the basis of God's grace through the sacrifice of Jesus.^{[[30](#)][[need quotation to verify](#)]}

There are also beliefs in [universal salvation](#).

Origin of the soul[edit]

The Damned Soul. Drawing by [Michelangelo Buonarroti](#) c. 1525

The "origin of the soul" has provided a vexing question in Christianity. The major theories put forward include [soul creationism](#), [traducianism](#), and [pre-existence](#). According to soul creationism, God creates each individual soul created directly, either at the moment of conception or some later time. According to traducianism, the soul comes from the parents by natural generation. According to the preexistence theory, the soul exists before the moment of conception. There have been differing thoughts regarding whether human [embryos](#) have souls from conception, or whether there is a

point between conception and birth where the [fetus acquires a soul](#), [consciousness](#), and/or [personhood](#). Stances in this question might play a role in judgements on the [morality of abortion](#).^{[31][32][33]}

Trichotomy of the soul^[edit]

[Augustine](#) (354-430), one of western Christianity's most influential early Christian thinkers, described the soul as "a special substance, endowed with reason, adapted to rule the body". Some Christians espouse a [trichotomic](#) view of humans, which characterizes humans as consisting of a body (*soma*), soul (*psyche*), and spirit (*pneuma*).^[34] However, the majority of modern Bible scholars point out how the concepts of "spirit" and of "soul" are used interchangeably in many biblical passages, and so hold to dichotomy: the view that each human comprises a body and a soul. Paul said that the "body wars against" the soul, "For the word of God is living and active and sharper than any two-edged sword, and piercing as far as the division of soul and spirit" (Heb 4:12 NASB), and that "I buffet my body", to keep it under control.

Views of various denominations^[edit]

The present [Catechism of the Catholic Church](#) defines the soul as "the innermost aspect of humans, that which is of greatest value in them, that by which they are in God's image described as 'soul' signifies the *spiritual principle* in man".^[35] All souls living and dead will be judged by Jesus Christ when [he comes back to earth](#). The Catholic Church teaches that the existence of each individual soul is dependent wholly upon God: "The doctrine of the faith affirms that the spiritual and immortal soul is created immediately by God."^[36]

Depiction of the soul on a 17th-century tombstone at the cemetery of the [Old Dutch Church of Sleepy Hollow](#)

Protestants generally believe in the soul's existence, but fall into two major camps about what this means in terms of an [afterlife](#). Some, following [Calvin](#),^[37] believe in the [immortality of the soul](#) and conscious existence after death, while others, following [Luther](#),^[38] believe in the [mortality of the soul](#) and unconscious "sleep" until the [resurrection of the dead](#).^[39] Various [new religious movements](#) deriving from [Adventism](#)—including [Christadelphians](#),^[40] [Seventh-day Adventists](#)^[citation needed] and [Jehovah's Witnesses](#)^{[41][42]}—similarly believe that the dead do not possess a soul separate from the body and are unconscious until the resurrection.

[The Church of Jesus Christ of Latter-day Saints](#) teaches that the spirit and body together constitute the Soul of Man (Mankind). "The spirit and the body are the soul of man."^[43] Latter-day Saints believe that the soul is the union of a pre-existing, God-made spirit^{[44][45][46]} and a temporal body, which is formed by physical conception on earth. After death, the spirit continues to live and progress in the [Spirit world](#) until the [resurrection](#), when it is reunited with the body that once housed it.

This reuniting of body and spirit results in a perfect soul that is immortal and eternal and capable of receiving a fulness of joy.^{[47][48]} Latter-day Saint cosmology also describes "intelligences" as the essence of consciousness or agency. These are co-eternal with God, and animate the spirits.^[49] The union of a newly-created spirit body with an eternally-existing intelligence constitutes a "spirit birth"^[citation needed] and justifies God's title "Father of our spirits".^{[50][51][52]}

Confucianism[\[edit\]](#)

Some Confucian traditions contrast a spiritual soul with a corporeal soul.^[53]

Hinduism[\[edit\]](#)

Main articles: [Ātman \(Hinduism\)](#) and [Jiva](#)

Hindu last rites for departed souls

Ātman is a [Sanskrit](#) word that means inner [self](#) or soul.^{[54][55][56]} In [Hindu philosophy](#), especially in the [Vedanta](#) school of [Hinduism](#), Ātman is the [first principle](#),^[57] the *true* self of an individual beyond identification with phenomena, the essence of an individual. In order to attain [liberation \(moksha\)](#), a human being must acquire self-knowledge (atma [jnana](#)), which is to realize that one's true self (Ātman) is identical with the transcendent self [Brahman](#).^{[55][58]}

The [six orthodox schools of Hinduism](#) believe that there is Ātman (self, essence) in every being.^[59]

In [Hinduism](#) and [Jainism](#), a *jiva* ([Sanskrit](#): जीव, *jīva*, alternative spelling *jiwa*; [Hindi](#): जीव, *jīv*, alternative spelling *jeev*) is a living being, or any entity imbued with a life force.^[60]

In Jainism, *jiva* is the immortal essence or soul of a living organism (human, animal, fish or plant etc.) which survives physical death.^[61] The concept of *Ajiva* in Jainism means "not soul", and represents matter (including body), time, space, non-motion and

motion.^[61] In Jainism, a *Jiva* is either *samsari* (mundane, caught in cycle of rebirths) or *mukta* (liberated).^{[62][63]}

The concept of *jiva* in Jainism is similar to *atman* in Hinduism. However, some Hindu traditions differentiate between the two concepts, with *jiva* considered as individual self, while *atman* as that which is universal unchanging self that is present in all living beings and everything else as the metaphysical *Brahman*.^{[64][65][66]} The latter is sometimes referred to as *jiva-atman* (a soul in a living body).^[64] According to [Brahma Kumaris](#), the soul is an eternal point of light.

Islam^[edit]

Main articles: [Rūh](#) and [Nafs](#)

The [Quran](#), the holy book of [Islam](#), distinguishes between the immortal [Rūh](#) (translated as spirit, consciousness, pneuma or "soul") and the mortal [Nafs](#) (translated as self, ego, psyche or "soul").^{[67][68]} The immortal Rūḥ "drives" the mortal Nafs, which comprises temporal desires and perceptions necessary for living.^[69] One of the passages in the Quran that mention Rūḥ occur in chapter 17 ("The Night Journey"), whereas a mention of Nafs occurs in Chapter 39 ("The Throngs"):

And they ask you, [O Muhammad], about the Rūḥ. Say, "The Rūḥ is of the affair of my Lord. And mankind has not been given of knowledge except a little.

— *Quran 17:85*

It is Allah that takes the Nafs at death: and those that die not (He takes it) during their sleep: then those on whom He has passed the Decree of death He keeps back (their Nafs from returning); but the rest He sends back for a term appointed. Verily in this are Signs for those who contemplate.

— *Qur'an 39:42*

Jainism^[edit]

Main articles: [Jīva \(Jainism\)](#) and [Vitalism \(Jainism\)](#)

Further information: [Jain philosophy](#) and [Jainism and non-creationism](#)

In Jainism, every living being, from plant or bacterium to human, has a soul and the concept forms the very basis of Jainism. According to Jainism, there is no beginning or end to the existence of soul. It is eternal in nature and changes its form until it attains liberation.

The soul ([Jīva](#)) is basically categorized in one of two ways based on its present state.^[*citation needed*]

1. Liberated Souls – These are souls which have attained liberation ([moksha](#)) and never become part of the life cycle again.
2. Non-Liberated Souls – The souls of any living being which are stuck in the life cycle of 4 forms; *ManushyaGati* (Human Being), *Tiryanch*

Gati (Any other living being), *Dev Gati* (Heaven) and *Narak Gati* (Hell).

Until the time the soul is liberated from the [samsāra](#) (cycle of repeated birth and death), it gets attached to one of these bodies based on the [karma](#) (actions) of the individual soul. Irrespective of which state the soul is in, it has got the same attributes and qualities. The difference between the liberated and non-liberated souls is that the qualities and attributes are manifested completely in case of [siddha](#) (liberated soul) as they have overcome all the karmic bondages whereas in case of non-liberated souls they are partially exhibited.

Concerning the Jain view of the soul, [Virchand Gandhi](#) said the soul lives its own life, not for the purpose of the body, but the body lives for the purpose of the soul. If we believe that the soul is to be controlled by the body then soul misses its power.^[70]

Judaism^[edit]

This Section **relies too much on references to primary sources**. Please improve this Section by adding [secondary](#) or [tertiary sources](#). (October 2019) ([Learn how and when to remove this template message](#))

The [Hebrew](#) terms נפש [nefesh](#) (literally "living being"), רוח [ruach](#) (literally "wind"), נשמה [neshamah](#) (literally "breath"), חיה [chayah](#) (literally "life") and יחידה [yechidah](#) (literally "singularity") are used to describe the soul or spirit.^[71]

In [Judaism](#) the soul was believed to be given by God to Adam as mentioned in [Genesis](#), Then the LORD God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul.

— [Genesis 2:7](#)

Judaism relates the quality of one's soul to one's performance of the commandments ([mitzvot](#)) and reaching higher levels of understanding, and thus closeness to God. A person with such closeness is called a [tzadik](#). Therefore, Judaism embraces the commemoration of the day of one's death, [nahala](#)/*Yahrtzeit* and not the [birthday](#)^[72] as a festivity of remembrance, for only toward the end of life's struggles, tests and challenges could human souls be judged and credited for righteousness.^{[73][74]} Judaism places great importance on the study of the souls.^[75]

[Kabbalah](#) and other mystic traditions go into greater detail into the nature of the soul. Kabbalah separates the soul into five elements, corresponding to the [five worlds](#):

1. [Nefesh](#), related to natural instinct.
2. [Ruach](#), related to emotion and morality.
3. Neshamah, related to intellect and the awareness of God.
4. Chayah, considered a part of God, as it were.
5. Yechidah. This aspect is essentially one with God.

Kabbalah also proposed a concept of reincarnation, the *gilgul*. (See also *nefesh habehamit* the "animal soul".)

Scientology[\[edit\]](#)

The [Scientology](#) view is that a person does not have a soul, it is a soul. A person is immortal, and may be reincarnated if they wish. The Scientology term for the soul is "[thetan](#)", derived from the Greek word "theta", symbolizing thought. Scientology counselling (called [auditing](#)) addresses the soul to improve abilities, both worldly and spiritual.

Shamanism[\[edit\]](#)

The belief in soul dualism found throughout most [Austronesian shamanistic](#) traditions. The reconstructed [Proto-Austronesian](#) word for the "body soul" is **nawa* ("breath", "life", or "vital spirit"). It is located somewhere in the [abdominal cavity](#), often in the [liver](#) or the [heart](#) (Proto-Austronesian **qaCay*).^{[76][77]} The "free soul" is located in the head. Its names are usually derived from Proto-Austronesian **qaNiCu* ("ghost", "spirit [of the dead]"), which also apply to other non-human nature spirits.

The "free soul" is also referred to in names that literally mean "twin" or "double", from Proto-Austronesian **duSa* ("two").^{[78][79]} A virtuous person is said to be one whose souls are in harmony with each other, while an evil person is one whose souls are in conflict.^[80]

The "free soul" is said to leave the body and journey to the [spirit world](#) during sleep, [trance-like states](#), [delirium](#), [insanity](#), and death. The duality is also seen in the healing traditions of Austronesian shamans, where illnesses are regarded as a "soul loss" and thus to heal the sick, one must "return" the "free soul" (which may have been stolen by an evil spirit or got lost in the spirit world) into the body. If the "free soul" can not be returned, the afflicted person dies or goes permanently insane.^[81]

In some ethnic groups, there can also be more than two souls. Like among the [Tagbanwa people](#), where a person is said to have six souls - the "free soul" (which is regarded as the "true" soul) and five secondary souls with various functions.^[76]

Kalbo [Inuit](#) groups believe that a person has more than one type of soul. One is associated with respiration, the other can accompany the body as a shadow.^[82] In some cases, it is connected to [shamanistic beliefs among the various Inuit groups](#).^[83] Also [Caribou Inuit](#) groups believed in several types of souls.^[84]

The [shaman](#) heals within the spiritual dimension by returning 'lost' parts of the human soul from wherever they have gone. The shaman also cleanses excess negative energies, which confuse or pollute the soul.

Sikhism[\[edit\]](#)

[Sikhism](#) considers soul (*atma*) to be part of God ([Waheguru](#)). Various hymns are cited from the holy book [Guru Granth Sahib](#) (SGGS) that suggests this belief. "God is in the Soul and the Soul is in the God."^[85] The same concept is repeated at various pages of

the SGGS. For example: "The soul is divine; divine is the soul. Worship Him with love."^[86] and "The soul is the Lord, and the Lord is the soul; contemplating the Shabad, the Lord is found."^[87]

The *atma* or soul according to Sikhism is an entity or "spiritual spark" or "light" in our body because of which the body can sustain life. On the departure of this entity from the body, the body becomes lifeless – No amount of manipulations to the body can make the person make any physical actions. The soul is the 'driver' in the body. It is the *roohu* or spirit or *atma*, the presence of which makes the physical body alive.

Many religious and philosophical traditions support the view that the soul is the ethereal substance – a spirit; a non material spark – particular to a unique living being. Such traditions often consider the soul both immortal and innately aware of its immortal nature, as well as the true basis for sentience in each living being. The concept of the soul has strong links with notions of an afterlife, but opinions may vary wildly even within a given religion as to what happens to the soul after death. Many within these religions and philosophies see the soul as immaterial, while others consider it possibly material.

Taoism[\[edit\]](#)

According to Chinese traditions, every person has two types of soul called [hun and po](#) (魂 and 魄), which are respectively [yang and yin](#). [Taoism](#) believes in ten souls, *sanhunqipo* (三魂七魄) "three *hun* and seven *po*".^[88] A living being that loses any of them is said to have mental illness or [unconsciousness](#), while a dead soul may [reincarnate](#) to a [disability](#), lower [desire realms](#), or may even be unable to reincarnate.

Zoroastrianism[\[edit\]](#)

Main article: [Zoroastrianism](#)

Other religious beliefs and views[\[edit\]](#)

[Charon](#) (Greek) who guides dead souls to the Underworld. 4th century BCE.

In theological reference to the soul, the terms "life" and "death" are viewed as emphatically more definitive than the common concepts of "[biological life](#)" and "biological death". Because the soul is said to be transcendent of the *material existence*, and is said to have (potentially) [eternal life](#), the death of the soul is likewise said to be an *eternal death*. Thus, in the concept of [divine judgment](#), God is commonly said to have options with regard to the dispensation of souls, ranging from [Heaven](#) (i.e., [angels](#)) to [hell](#) (i.e., [demons](#)), with various concepts in between. Typically both Heaven and hell are said to be eternal, or at least far beyond a typical human concept of [lifespan](#) and time.

According to [Louis Ginzberg](#), soul of [Adam](#) is the image of [God](#).^[89] Every soul of human also escapes from the body every night, rises up to heaven, and fetches new life thence for the body of man.^[90]

Spirituality, New Age, and new religions[\[edit\]](#)

Dada Bhagwan[\[edit\]](#)

In [Dada Bhagwan](#), The Soul is an independent eternal element. The Soul is permanent. In order to experience the Soul you need to attain [Self-Realization](#).^[91]

Brahma Kumaris[\[edit\]](#)

In [Brahma Kumaris](#), human souls are believed to be incorporeal and [eternal](#). God is considered to be the Supreme Soul, with maximum degrees of spiritual qualities, such as peace, love and purity.^[92]

Theosophy[\[edit\]](#)

In [Helena Blavatsky](#)'s [Theosophy](#), the soul is the field of our psychological activity (thinking, emotions, memory, desires, will, and so on) as well as of the so-called paranormal or [psychic](#) phenomena (extrasensory perception, out-of-body experiences, etc.). However, the soul is not the highest, but a middle dimension of human beings. Higher than the soul is the spirit, which is considered to be the real self; the source of everything we call "good"—happiness, wisdom, love, compassion, harmony, peace, etc. While the spirit is eternal and incorruptible, the soul is not.

The soul acts as a link between the material body and the spiritual self, and therefore shares some characteristics of both. The soul can be attracted either towards the spiritual or towards the material realm, being thus the "battlefield" of good and evil. It is

only when the soul is attracted towards the spiritual and merges with the Self that it becomes eternal and divine.

Anthroposophy[\[edit\]](#)

[Rudolf Steiner](#) claimed classical [trichotomic](#) stages of soul development, which interpenetrated one another in consciousness:^[93]

- The "sentient soul", centering on sensations, drives, and passions, with strong [conative](#) (will) and emotional components;
- The "intellectual" or "mind soul", internalizing and reflecting on outer experience, with strong affective (feeling) and cognitive (thinking) components; and
- The "consciousness soul", in search of universal, objective truths.

Miscellaneous[\[edit\]](#)

In [Surat Shabda Yoga](#), the soul is considered to be an exact replica and spark of the Divine. The purpose of Surat Shabd Yoga is to realize one's True Self as soul (Self-Realisation), True Essence (Spirit-Realisation) and True Divinity (God-Realisation) while living in the physical body.

Similarly, the spiritual teacher [Meher Baba](#) held that "Atma, or the soul, is in reality identical with Paramatma the Oversoul — which is one, infinite, and eternal...[and] [t]he sole purpose of creation is for the soul to enjoy the infinite state of the Oversoul consciously."^[94]

[Eckankar](#), founded by [Paul Twitchell](#) in 1965, defines Soul as the true self; the inner, most sacred part of each person.^[95]

Philosophical views[\[edit\]](#)

The [ancient Greeks](#) used the word "[ensouled](#)" to represent the concept of being "alive", indicating that the earliest surviving [western philosophical](#) view believed that the soul was that which gave the body life.^[96] The soul was considered the incorporeal or spiritual "breath" that animates (from the Latin, *anima*, cf. "animal") the living organism.

[Francis M. Cornford](#) quotes [Pindar](#) by saying that the soul sleeps while the limbs are active, but when one is sleeping, the soul is active and reveals "an award of joy or sorrow drawing near" in dreams.^[97]

[Erwin Rohde](#) writes that an early pre-[Pythagorean](#) belief presented the soul as lifeless when it departed the body, and that it retired into [Hades](#) with no hope of returning to a body.^[98]

Socrates and Plato^[edit]

[Plato](#) (left) and [Aristotle](#) (right), a detail of [The School of Athens](#), a [fresco](#) by [Raphael](#).

Main article: [Plato's tripartite theory of soul](#)

Drawing on the words of his teacher Socrates, Plato considered the psyche to be the [essence](#) of a person, being that which decides how we behave. He considered this essence to be an incorporeal, eternal occupant of our being. Plato said that even after death, the soul exists and is able to think. He believed that as bodies die, the soul is continually reborn ([metempsychosis](#)) in subsequent bodies. However, Aristotle believed that only one part of the soul was immortal namely the intellect ([logos](#)). The Platonic soul consists of three parts:^[99]

1. the *logos*, or *logistikon* (mind, [nous](#), or [reason](#))
2. the *thymos*, or *thumetikon* ([emotion](#), spiritedness, or masculine)
3. the *eros*, or *epithumetikon* (appetitive, [desire](#), or feminine)

The parts are located in different regions of the body:

1. *logos* is located in the head, is related to reason and regulates the other part.
2. *thymos* is located near the chest region and is related to anger.
3. *eros* is located in the stomach and is related to one's desires.

Plato also compares the three parts of the soul or psyche to a societal [caste system](#). According to Plato's theory, the three-part soul is essentially the same thing as a state's class system because, to function well, each part must contribute so that the whole functions well. Logos keeps the other functions of the soul regulated.

Aristotle^[edit]

The structure of the souls of plants, animals, and humans, according to [Aristotle](#), with *Bios*, *Zoê*, and *Psūchê*

Aristotle (384–322 BCE) defined the soul, or *Psūchê* (ψυχή), as the "[first actuality](#)" of a naturally organized body,^[100] and argued against its separate existence from the physical body. In Aristotle's view, the primary activity, or full actualization, of a living thing constitutes its soul.

For example, the full actualization of an eye, as an independent organism, is to see (its purpose or [final cause](#)).^[101] Another example is that the full actualization of a human being would be living a

fully functional human life in accordance with reason (which he considered to be a faculty unique to humanity).^[102] For Aristotle, the soul is the organization of the form and matter of a natural being which allows it to strive for its full actualization.

This organization between form and matter is necessary for any activity, or functionality, to be possible in a natural being. Using an artifact (non-natural being) as an example, a house is a building for human habitation, but for a house to be actualized requires the material (wood, nails, bricks, etc.) necessary for its actuality (i.e. being a fully functional house).

However, this does not imply that a house has a soul. In regards to artifacts, the source of motion that is required for their full actualization is outside of themselves (for example, a builder builds a house). In natural beings, this source of motion is contained within the being itself.^[103] Aristotle elaborates on this point when he addresses the faculties of the soul.

The various [faculties of the soul](#), such as nutrition, movement (peculiar to animals), reason (peculiar to humans), sensation (special, common, and incidental) and so forth, when exercised, constitute the "second" actuality, or fulfillment, of the capacity to be alive. For example, someone who falls asleep, as opposed to someone who falls dead, can wake up and live their life, while the latter can no longer do so.

Aristotle identified three hierarchical levels of natural beings: plants, animals, and people, having three different degrees of soul: *Bios* (life), *Zoë* (animate life), and *Psuchë* (self-conscious life). For these groups, he identified three corresponding levels of soul, or biological activity: the nutritive activity of growth, sustenance and reproduction which all life shares (*Bios*); the self-willed motive activity and sensory faculties, which only animals and people have in common (*Zoë*); and finally "reason", of which people alone are capable (*Psuchë*).

Aristotle's discussion of the soul is in his work, *De Anima* ([On the Soul](#)). Although mostly seen as opposing Plato in regard to the immortality of the soul, a controversy can be found in relation to the fifth chapter of the third book:

In this text both interpretations can be argued for, soul as a whole can be deemed mortal, and a part called "active intellect" or "active mind" is immortal and eternal.^[104] Advocates exist for both sides of the controversy, but it has been understood that there will be permanent disagreement about its final conclusions, as no other [Aristotelian](#) text contains this specific point, and this part of *De Anima* is obscure.^[105] Further, Aristotle states that the soul helps humans find the truth and understanding the true purpose or role of the soul is extremely difficult.^[106]

Avicenna and Ibn al-Nafis^[edit]

This section **needs additional citations for [verification](#)**. Please help [improve this article](#) by [adding citations to reliable sources](#). Unsourced material may be challenged and removed.

Find sources: "Soul" – [news](#) · [newspapers](#) · [books](#) · [scholar](#) · [JSTOR](#) (December 2014) ([Learn how and when to remove this template message](#))

Following Aristotle, [Avicenna](#) (Ibn Sina) and [Ibn al-Nafis](#), an Arab physician, further elaborated upon the Aristotelian understanding of the soul and developed their own theories on the soul. They both made a distinction between the soul and the spirit, and the [Avicennian](#) doctrine on the nature of the soul was influential among the [Scholastics](#). Some of Avicenna's views on the soul include the idea that the immortality of the soul is a consequence of its nature, and not a purpose for it to fulfill. In his theory of "The Ten Intellects", he viewed the human soul as the tenth and final [intellect](#).

While he was imprisoned, Avicenna wrote his famous "Floating Man" [thought experiment](#) to demonstrate human [self-awareness](#) and the substantial nature of the soul.^[107] He told his readers to imagine themselves suspended in the air, isolated from all sensations, which includes no [sensory](#) contact with even their own bodies. He argues that in this scenario one would still have [self-consciousness](#).

He thus concludes that the idea of the [self](#) is not logically dependent on any physical [thing](#), and that the soul should not be seen in [relative terms](#), but as a primary given, a [substance](#). This argument was later refined and simplified by [René Descartes](#) in [epistemic](#) terms, when he stated: "I can abstract from the supposition of all external things, but not from the supposition of my own consciousness."^[108]

Avicenna generally supported Aristotle's idea of the soul originating from the [heart](#), whereas Ibn al-Nafis rejected this idea and instead argued that the soul "is related to the entirety and not to one or a few [organs](#)". He further criticized Aristotle's idea whereby every unique soul requires the existence of a unique source, in this case the heart. al-Nafis concluded that "the soul is related primarily neither to the spirit nor to any organ, but rather to the entire matter whose temperament is prepared to receive that soul," and he defined the soul as nothing other than "what a human indicates by saying "I".^[109]

Thomas Aquinas^[edit]

Following Aristotle (whom he referred to as "the Philosopher") and Avicenna, [Thomas Aquinas](#) (1225–74) understood the soul to be the first actuality of the living body. Consequent to this, he distinguished three orders of life: plants, which feed and grow; animals, which add sensation to the operations of plants; and humans, which add intellect to the operations of animals.

Concerning the human soul, his epistemological theory required that, since the knower becomes what he knows, the soul is definitely not corporeal—if it is corporeal when it knows what some corporeal thing is, that thing would come to be within it.^[110] Therefore, the soul has an operation which does not rely on a body organ, and therefore the soul

can exist without a body. Furthermore, since the rational soul of human beings is a subsistent form and not something made of matter and form, it cannot be destroyed in any natural process.^[111] The full argument for the [immortality of the soul](#) and Aquinas' elaboration of Aristotelian theory is found in Question 75 of the First Part of the [Summa Theologica](#).

Immanuel Kant[\[edit\]](#)

In his discussions of rational psychology, [Immanuel Kant](#) (1724–1804) identified the soul as the "I" in the strictest sense, and argued that the existence of inner experience can neither be proved nor disproved.

We cannot prove a priori the immateriality of the soul, but rather only so much: that all properties and actions of the soul cannot be recognized from materiality.

It is from the "I", or soul, that Kant proposes transcendental rationalization, but cautions that such rationalization can only determine the limits of knowledge if it is to remain practical.^[112]

Philosophy of mind[\[edit\]](#)

Main article: [Philosophy of mind](#)

[Gilbert Ryle's ghost in the machine](#) argument, which is a rejection of Descartes' [mind–body dualism](#), can provide a contemporary understanding of the soul/mind, and the problem concerning its connection to the brain/body.^[113]

James Hillman[\[edit\]](#)

Psychologist James Hillman's [archetypal psychology](#) is an attempt to restore the concept of the soul, which Hillman viewed as the "self-sustaining and imagining substrate" upon which consciousness rests. Hillman described the soul as that "which makes meaning possible, [deepens] events into experiences, is communicated in love, and has a religious concern", as well as "a special relation with death".^[114] Departing from the Cartesian [dualism](#) "between outer tangible reality and inner states of mind", Hillman takes the [Neoplatonic](#) stance^[115] that there is a "third, middle position" in which soul resides.^[116] Archetypal psychology acknowledges this third position by attuning to, and often accepting, the [archetypes](#), [dreams](#), [myths](#), and even [psychopathologies](#) through which, in Hillman's view, soul expresses itself.

Science[\[edit\]](#)

The current [scientific consensus](#) across all fields is that there is no evidence for the existence of any kind of soul in the traditional sense. Many modern scientists, such as Julien Musolino, hold that the mind is merely a complex machine that operates on the same physical laws as all other objects in the universe.^[117] According to Musolino, there is currently no scientific evidence whatsoever to support the existence of the soul;^[117] he claims there is also considerable evidence that seems to indicate that souls do not exist.^[117]

The search for the soul, however, is seen to have been instrumental in driving the understanding of the anatomy and physiology of the human body, particularly in the

fields of cardiovascular and neurology.^[118] In the two dominant conflicting concepts of the soul – one seeing it to be spiritual and immortal, and the other seeing it to be material and mortal, both have described the soul as being located in a particular organ or as pervading the whole body.^[118]

Neuroscience^[edit]

Neuroscience as an **interdisciplinary** field, and its branch of **cognitive neuroscience** particularly, operates under the **ontological** assumption of **physicalism**. In other words, it assumes—in order to perform its science—that only the fundamental phenomena studied by **physics** exist. Thus, neuroscience seeks to understand mental phenomena within the framework according to which human **thought** and **behavior** are caused solely by physical processes taking place inside the brain, and it operates by the way of **reductionism** by seeking an explanation for the mind in terms of brain activity.^{[119][120]}

To study the mind in terms of the brain several methods of **functional neuroimaging** are used to study the neuroanatomical correlates of various **cognitive processes** that constitute the mind. The evidence from brain imaging indicates that all processes of the mind have physical correlates in brain function.^[121] However, such correlational studies cannot determine whether neural activity plays a causal role in the occurrence of these cognitive processes (**correlation does not imply causation**) and they cannot determine if the neural activity is either **necessary or sufficient** for such processes to occur.

Identification of **causation**, and of necessary and sufficient conditions requires explicit experimental manipulation of that activity. If manipulation of brain activity changes consciousness, then a causal role for that brain activity can be inferred.^{[122][123]} Two of the most common types of manipulation experiments are loss-of-function and gain-of-function experiments.

In a loss-of-function (also called "necessity") experiment, a part of the nervous system is diminished or removed in an attempt to determine if it is necessary for a certain process to occur, and in a gain-of-function (also called "sufficiency") experiment, an aspect of the nervous system is increased relative to normal.^[124] Manipulations of brain activity can be performed with direct **electrical brain stimulation**, magnetic brain stimulation using **transcranial magnetic stimulation**, **psychopharmacological** manipulation, **optogenetic** manipulation, and by studying the symptoms of **brain damage** (case studies) and **lesions**. In addition, neuroscientists are also investigating how the mind develops with the development of the brain.^[125]

Physics^[edit]

Physicist **Sean M. Carroll** has written that the idea of a soul is incompatible with **quantum field theory** (QFT). He writes that for a soul to exist: "Not only is new physics required, but dramatically new physics. Within QFT, there can't be a new collection of 'spirit particles' and 'spirit forces' that interact with our regular atoms, because we would have detected them in existing experiments."^[126]

Some^{[[quantify](#)]} theorists have invoked [quantum indeterminism](#) as an explanatory mechanism for possible soul/brain interaction, but neuroscientist Peter Clarke found errors with this viewpoint, noting there is no evidence that such processes play a role in brain function; Clarke concluded that a [Cartesian](#) soul has no basis from quantum physics.^{[[127](#)][*need quotation to verify*]}

Parapsychology^{[[edit](#)]}

Some [parapsychologists](#) have attempted to establish, by [scientific](#) experiment, whether a soul separate from the brain exists, as is more commonly defined in religion rather than as a synonym of psyche or mind. [Milbourne Christopher](#) (1979) and [Mary Roach](#) (2010) have argued that none of the attempts by parapsychologists have yet succeeded.^{[[128](#)][[129](#)]}

Weight of the soul^{[[edit](#)]}

In 1901 [Duncan MacDougall](#) conducted [an experiment](#) in which he made weight measurements of patients as they died. He claimed that there was weight loss of varying amounts at the time of death; he concluded the soul weighed 21 grams.^{[[130](#)][[131](#)]} The physicist [Robert L. Park](#) has written that MacDougall's experiments "are not regarded today as having any scientific merit" and the psychologist [Bruce Hood](#) wrote that "because the weight loss was not reliable or replicable, his findings were unscientific."^{[[132](#)][[133](#)]}
